

In order to replace the wood decking at your home, the AC condensers need to be disconnected, moved off of the deck, and reconnected after the new Trex composite decking has been installed. The decking crew is working their way through the community. A separate notice will be posted prior to the decking replacement.

Your AC us scheduled to be disconnected on \_\_\_\_\_ at \_\_\_\_\_

**We need your assistance to ensure the removal and reinstallation is completed without issue.** This will disrupt your air conditioning while the condenser is disconnected.

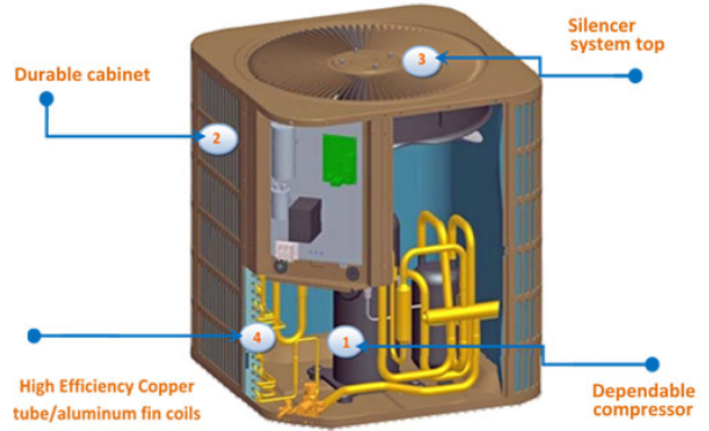

- **Brief access to your home/thermostat will be required to turn the system on and test for proper function during the disconnection, (best option). You may also turn your thermostat fan setting to constant or on, (good option).**
- **Each disconnection will take 30-60 minutes to complete.**
- **The refrigerant will be pumped down and stored in the unit's condenser. There is no refrigerant lost during this process.**
- **If the refrigerant is low, additional refrigerant can be added for an additional cost of \$150 per pound for R-22 and \$85 for R-410A. This will be communicated to you before added.**
- **Please contact Justin at 612-254-7373 with any questions.**

**Note: If access to the thermostat is not provided or fan not left on we cannot test for proper function. We will not be responsible for the performance of the system if access is not provided.**
