

Soffit & Fascia Rework

Please be advised that the soffit & fascia work is scheduled to begin on your building on: _____. This work is expected to take approximately 3-5 days to complete depending on the size of the building.

The work consists of removing the aluminum soffit & fascia, cutting out the old wood soffit, and installing baffles between the roof trusses to promote better air intake. The soffit and fascia will be reinstalled to restore the original look.

The front of the building will be completed first and then the crew will move to the back of the building.

How to prepare for the project and what to expect:

1. KEEP CHILDREN AND PETS AWAY FROM THE WORK AREA. DANGER KEEP OUT!
2. Be prepared for the noise. Crews generally start early in the morning 8:00 am to 6:00 pm. There will be constant noise during the construction process.
3. Remove all items from around the exterior of your home where work will be completed. All reasonable efforts are made to protect personal items and landscaping, but construction debris will fall and cause damage to these items.
4. Please move all vehicles from your garage and off of the driveways while work is taking place on the front of the buildings. Remove all personal items from the decks.
5. The use of power tools may be needed to complete the approved work. Access to an outlet may be needed. **Please notify us if you have any concerns with this.**
6. Daily cleanup of the job site will be completed. Every effort to pick up nails is made. Magnetic rollers are used, but a few nails may be hidden in the grass.
7. Communication and responsiveness is a top priority. Please feel free to contact us with any questions or concerns you may have. Our mission is to provide high quality work with as little impact on your community as possible.

Thank you in advance for your patience and understanding.
