

Aluminum Wire Replacement Notice

Please be advised that the aluminum wire replacement is scheduled to start at your home on _____, with work beginning at 7:30 am each day. The work is expected to take two days to complete, with Friday reserved for any additional work on the homes worked on during the assigned week.

The work will consist of removing the existing aluminum wires and pulling new copper wire through the conduit, replacing all non-code-compliant switches, outlets, and fixtures. All existing circuits will receive new GFCIs and AFCIs breakers or new GFCIs and AFCIs receptacles. **GFCI (ground fault circuit interrupter), AFCI (Arc-Fault circuit interrupter).**

Any additional work beyond the scope of work will have an estimate provided, and will not be completed without approval.

Important Notes:

- **Work hours are Monday through Friday, 7:30 am to 4:00 pm.**
- **Any existing copper wiring, switches, outlets, and fixtures will be left in place, assuming they meet current electrical codes.**
- **Owners don't need to be present during the day, but access will be required on all scheduled work days and a final inspection on Friday.**
- **All personal items must be moved before the electrician's arrival.**

To complete the work, please:

- **Ensure daily access to your home is provided by leaving the door unlocked, a lockbox and code, or a code for the entrance lock. All doors will be locked at the end of each day. Email or call to provide the information to the contacts below.**
- **Provide 3-5 feet of clearance around all switches, outlets, fixtures, and appliances. This includes the garage. Additional charges may apply for delays in the project.**
- **Ensure any pets are kenneled, or other arrangements are made to allow the electricians to focus on their work.**

If you have any electrical questions, please contact Brad with Lawinger Electric at 763-200-6220. If you have questions regarding scheduling or non-electrical questions, please contact Justin Hamm at 612-644-5268 or email Info@Atlasmn.com
